Profile Summary

Aspiring Software Engineer skilled in Java, Spring Boot, React, and cloud-native application development. Proficient in AI-assisted development (Cursor, Claude, MCP) and prompt engineering to accelerate delivery. Experienced in building scalable applications through internships, hackathons, and personal projects.

Education

JSPM's Rajashri Shahu College of Engineering, Pune Nov 2024 – Present
B.Tech in Computer Science CGPA: 9.25

Government Polytechnic, Nashik Aug 2021 – Aug 2024
Diploma in Computer Technology 91.18%

Skills

Languages: Java, SQL, JavaScript, Python, C/C++
Backend: Spring Boot, Spring MVC, Spring Data JPA, Spring Security, REST APIs, Hibernate, Express.js
Frontend: React.js, JavaScript, HTML, CSS
Databases: MySQL, MongoDB
AI-Assisted Development: Cursor, Claude (Opus), Antigravity, MCP (Context7), Prompt Engineering, Local LLMs (Qwen, Mistral)
Tools & Cloud: Git, Postman, Docker, CI/CD, AWS, Linux
Concepts: Object Oriented Programming, Data Structures, Database Management System, Computer Networks, Operating Systems, REST APIs

Experience

MERN Stack Intern — SUMAGO Infotech Feb 2024 – Sept 2024

Developed scalable full-stack applications and RESTful APIs, improving response time and performance efficiency. Implemented backend logic, handled API integrations, optimized database queries, and assisted in testing and debugging. Used Git for version control and collaborated through code reviews and feature-based branching.

Linux & Ethical Hacking Trainee — WhiteBand Associates Mar 2024 – Aug 2024

Gained hands-on experience in cybersecurity fundamentals, networking, Linux, and vulnerability assessment using Burp Suite.

Projects

PreURL — URL Shortener GitHub

- Engineered a URL shortening service built for horizontal scalability using collision-resistant ID generation and Redis caching to cut database load and latency.
- Added deferred destination binding, time- and click-based link expiry, and Pro-tier visitor analytics; deployed on AWS EC2.
- Designed and exposed RESTful APIs for link management, tested using Postman.

PrintGo Kiosk — QR-Based Self-Service Printing System GitHub

- Automated an estimated 90–94% of the print workflow end-to-end, limiting manual intervention to periodic paper refills.
- Enabled direct browser-to-S3 PDF uploads via pre-signed URLs to offload the backend, with client-side multi-file merging and interactive page selection, range, B&W/color, and copy-count controls built in React using react-pdf.
- Modeled each job as a state machine (uploaded, paid, printing, printed) using SQL status flags, with MongoDB for kiosk/admin data and SQL for transactional and payment records.
- Designed a distributed architecture connecting multiple kiosks to a centralized backend server, following microservices-based principles for scalability, with integrated payment workflows for contactless checkout.
- Auto-deleted files from the kiosk immediately after printing and garbage-collected orphaned S3 files via a scheduled cron job; skipped authentication to keep checkout fast.

Make My Study Plan — AI Study Planner Frontend | Backend

- Built a full-stack AI-powered study planner integrating LLM APIs to generate personalized learning plans, with modular backend services and optimized data-processing logic for fast, scalable responses.
- Experimented with local LLM inference (Qwen, Mistral) via prompt engineering for offline usage scenarios.

Leadership

GDGoC — Web Development Lead Jul 2025 – Present

Led web development initiatives and organized technical events including HackNova Hackathon, collaborating with cross-functional teams.

Achievements

- Winner — Build and Grow Hackathon (Google Cloud), Pune; Finalist Mumbai (2026)
- First Prize — Hacktoberfest Hackathon (DigitalOcean, 2025)
- Participated in 7+ national hackathons, building full-stack systems under tight deadlines using AI-assisted coding workflows
